

## ***Plants and structure – the Anacardiaceae***

Subject: An insight into the structural dimension of plants and its use in clinical homoeopathy

The science of crystal structure has been tapped as a resource for understanding and prescribing medicines from the mineral and gemstone worlds. Understood in the homoeopathic context, the principles and data associated with crystal structure relate to eight distinct dimensions. These dimensions are rooted in science and explain the design of the intrinsic nature of the psyche in our clients. 'Psyche and Structure' (2017)

In an expansion of this published research, this presentation will extend its relevance to the plant kingdom. Case studies of plants in the Anacardiaceae family will be used to illustrate its practical clinical application. The clinically significant plants of this family will also be classified for the purpose of differentiation in everyday clinical practice.
